🎙️ ShopSphere Presentation Speech

Team: Shreya Khandelwal (Lead) • Khushboo Lakhani • Mahek | **Duration:** 5–7 Minutes

1. Shreya Khandelwal (Team Lead)

Intro & Platform Architecture

⏱ 2 Mins

*"Hi everyone, today our team is presenting **ShopSphere**, our full-stack E-Commerce platform built with a complete DevOps automated delivery pipeline.*

I led the project and focused on the core architecture and DevOps infrastructure:

- **Full-Stack Architecture:** Built the backend using Node.js and Express, connected to PostgreSQL with an automated SQLite fallback, and built the frontend in React with Vite.
- **Docker Architecture:** Containerized both frontend and backend services, and orchestrated the entire platform (app, database, Prometheus, and Grafana) using Docker Compose.
- **CI/CD Automation:** Configured an automated declarative Jenkins pipeline and GitHub Actions that runs automated Jest unit tests on every commit, builds Docker images, and deploys the application.
- **Monitoring & Telemetry:** Added Prometheus metrics middleware capturing live HTTP traffic, request latencies, and order counters.

I'll now hand over to Khushboo to talk about customer engagement and reviews."

2. Khushboo Lakhani

Reviews & Ratings System (SHOP-201)

⏱ 1.5 Mins

*"Hi everyone, I was responsible for designing and implementing the **Customer Reviews and Star Ratings system** under Jira ticket **SHOP-201**.*

Here's what I built:

- An interactive **1-to-5 Star Rating Selector** and feedback submission form.
- Dynamic score recalculation that updates average ratings and review counts instantly.
- Visual rating badges across product cards in the store.
- For our Git workflow, I developed this in my own branch `feature/khushboo-product-reviews`, followed Jira smart commit conventions, and merged it into main via a peer-reviewed Pull Request.

Now, Mahek will cover our discounts and promotions engine."

3. Mahek

Discounts, Cart & Checkout (SHOP-202)

1.5 Mins

*"Hi everyone, I developed the **Coupon and Discount Promotion System**, tracked under Jira user story **SHOP-202**.*

My key deliverables:

- Built the promo code validator supporting percentage discounts like `SAVE20` (20% off) and flat credits like `DEVOPS10`.
- Integrated real-time cart subtotal recalculations, updating taxes, discounts, and checkout totals dynamically.
- Ensured discounted orders persist correctly into the database when orders are placed.
- I worked in my branch `feature/mahek-discounts-coupons`, pushed my commits to GitHub, and merged via Pull Request after passing test checks.

Back to Shreya for the live demo."

Screen Share & Live Demo

1 Min

(Share your screen on `http://localhost:3000`)

"To wrap up, here is our live application:

1. Catalog: Products across Electronics, Accessories, and Apparel loaded with live API data.

2. Reviews (Khushboo): Open reviews on any product and submit a star rating.

3. Discounts (Mahek): Open the Cart, apply promo code `SAVE20`, and see the discount apply instantly.

4. DevOps Console: Click the 'DevOps Console' button in the navbar to show Jenkins build stages, Docker Compose architecture, Jira agile sprint board, and live Prometheus scrape metrics.

Thank you! We're happy to take any questions."
